Kanban and Contribution Evidence

AjxOm / Budget Bites
Evidence status as of October 30, 2026. This record separates verified repository work from unavailable ClickUp evidence. It does not recreate historical board snapshots.

Board identity

Supplied board URL: https://app.clickup.com/90141772424/v/g/2kydwjm8-434
Course team: Om Swaroop Reddy Udumula and Anton "A.J." Orea. Board access, task IDs, dated activity and implementation acceptance comments have not been verified in the current execution.

Workflow policy

Planned statuses: Backlog, Ready, In progress, Review / test and Done. In progress limit: one active task per person. Review/test limit: two team tasks. Blocked tasks remain in place and count toward WIP. Done requires acceptance criteria met, actual tests/review, documentation and a merge. The package does not claim these policies were applied daily without activity evidence.

Required snapshot	Evidence supplied
October 17 proposal	Full board snapshot unavailable. Earlier task-detail screenshot does not establish the complete board.
October 20 navigation	User reports unavailable.
October 23 functionality	User reports unavailable.
October 27 final	Not supplied or verified. A later screenshot must carry its actual capture date.

Historical record

Do not backdate a current board, invent task activity or treat a live URL as offline evidence. Missing snapshots remain disclosed. No private credentials, invitation tokens or unrelated personal information are included here.

Verified code traces and remaining evidence

Owner and work	Authentic repository evidence	ClickUp status
A.J.: Meal model and database	63ecb0a and 22798b8 on data branch	Task ID and dated activity not supplied
A.J.: History screen	2f6f7c1 and edcf9b3, preserved by integration merge	Task ID and review comments not supplied
Om: model, purchases and UI	41cd0ba, 40209f7, 309a618 and d45804e	Task ID not supplied
Om: evaluation and tests	f64bc35, e815deb, e892649; actual logs under evidence/	Task-to-code/test trace incomplete
Team integration	4994ec1 merges A.J. History with receipt data; PR #1 holds actual diff	Recorded task trace not yet provided

Repository: https://github.com/Omswaroopreddyudumula/ajxom-budget-bites
PR: https://github.com/Omswaroopreddyudumula/ajxom-budget-bites/pull/1

Observed integration improvement

The merge exposed mismatched database interfaces, ID use and editor navigation. A separate integration branch and focused regression checks resolved those incompatibilities before merging to main. The checks verify totals, child-record action targets and large-text layout. This is a code/process observation, not a measured ClickUp cycle-time improvement or peer review.

Required follow-through

Supply at least one authentic completed ClickUp implementation task per member with owner, acceptance criteria, dated activity, commit/PR and actual test/review result. Cover CRUD, helper and testing as a team. Supply any real daily WIP/throughput/age/cycle-time samples and explain a policy change with its observed result or limitation. Record one task-to-code/test trace in the team presentation. Include this PDF in the repository and each member's ZIP, while acknowledging that missing historical evidence remains unresolved.

The commit history remains below the course's steady 20-per-person expectation. No peer-tested design revision, YouTube recording or individual upload receipt is invented. Each member still needs to explain their actual contribution and submit individually.
